1. Why are budding, fragmentation and regeneration all considered as asexual types of reproduction? With neat diagrams explain the process of regeneration in *Planaria*.
  2. Write two points of difference between asexual and sexual types of reproduction. Describe why variations are observed in the offspring formed by sexual reproduction.
  3. Distinguish between pollination and fertilisation. Mention the site and product of fertilisation in a flower. Draw a neat, labelled diagram of a pistil showing pollen tube growth and its entry into the ovule.
  4. Distinguish between a gamete and zygote. Explain their roles in sexual reproduction.
  5. Draw the diagram of a flower and label the four whorls. Write the names of gamete producing organs in the flower.

1. Why does a turmeric stain on white shirt is turned to red when it is washed with soap?
2. A small amount of hydrochloric acid is always produced in the stomach. Is it useful or harmful for us? If excess of acid is produced in the stomach, what should we do?
3. Look at the given reaction.

Sodium chloride formed in this reaction remains in solution form. Can we get solid sodium chloride from this solution? Suggest a method (if any).

4. Give reasons for the following
    - i) Zinc oxide is considered an amphoteric oxide.
    - ii) Non-metals in general do not displace hydrogen from dilute acids.
    - iii) Metals conduct electricity.
  5. By what processes do you concentrate the following ores:
    - i) PbS(galena)
    - ii) Fe<sub>2</sub>O<sub>3</sub>(haematite)
    - iii) Al<sub>2</sub>O<sub>3</sub>.2H<sub>2</sub>O (bauxite).

1. A current of 10 A flows through a conductor for two minutes.
  - (i) Calculate the amount of charge passed through any area of cross section of the conductor.
  - (ii) If the charge of an electron is  $1.6 \times 10^{-19} \text{ C}$ , then calculate the total number of electrons flowing.
2. Draw the symbols of commonly used components in electric circuit diagrams for
  - (i) An electric cell
  - (ii) Open plug key
  - (iii) Wires crossing without connection
  - (iv) Variable resistor
  - (v) Battery
  - (vi) Electric bulb
  - (vii) Resistance
3. State Ohms law. Draw a labelled circuit diagram to verify this law in the laboratory. If you draw a graph between the potential difference and current flowing through a metallic conductor, what kind of curve will you get? Explain how would you use this graph to determine the resistance of the conductor.

4. A copper wire has diameter 0.5 mm and resistivity  $1.6 \times 10^{-8} \Omega \text{ m}$ . Calculate the length of this wire to make it resistance  $100 \Omega$ . How much does the resistance change if the diameter is doubled without changing its length?

A wire has a resistance of  $16 \Omega$ . It is melted and drawn into a wire of half its original length. Calculate the resistance of the new wire. What is the percentage change in its resistance.
